

enjoyment vocabulary Practical

At Kirkby-in-Malhamdale Primary School we believe learning science is concerned with increasing pupils' knowledge of our world, and with developing skills associated with science as a process of enquiry. Our science curriculum develops the natural curiosity of each child no matter their demographic, encourages them to have respect for living organisms, and instil in pupils the importance of caring for the natural environment.

Children are encouraged to be inquisitive, ask questions and explore finding answers for themselves.

SCIENCE

Science related trips take place and visitors come into school to further enthuse the children.

Science takes place in our Forest Area and in our school grounds.

Science makes links with real life and is relevant to the world we live in today.

Children share ideas and work together to reason and discuss.
